Profile

DevOps-focused engineer completing a Master of Software Engineering in Auckland (April 2027). I bring ten years of enterprise IT operations at DXC Technology, ANZ Bank Service Centre and Nokia, including monitoring 30,000+ hosts with Zabbix, Prometheus and Grafana and bulk automation with Ansible and Python. On the Master's I have built a containerised Django and React platform with 124 automated tests and worked hands-on with AWS security. I am looking for a DevOps or cloud role where I can work between development teams and the systems their code runs on.

Technical Skills

- **Cloud:** AWS (EC2, S3, IAM, VPC, Lambda, RDS), Azure, Cloudflare
- **DevOps:** Docker, Docker Compose, Git, Ansible, Python, Bash, PowerShell
- **Monitoring:** Zabbix, Prometheus, Grafana
- **Development:** Django REST Framework, React, PostgreSQL, MySQL
- **Systems and ITSM:** Linux, Windows Server, Active Directory, Intune, VMware Horizon, ITIL, ServiceNow

Projects

Sentinel+ healthcare compliance platform | Team of two, Jun – Jul 2026

- Ran a six-service stack (Django REST, React, PostgreSQL, Celery with RabbitMQ, MinIO, Ollama) with Docker Compose.
- Built a RAG assistant on a local Ollama model, so documents never leave the deployment.
- Backed the codebase with 124 automated pytest tests, delivered across three two-week sprints.

AWS cloud security and serverless research | MSE805 and MSE801, 2026

- Built a hands-on AWS security setup in Learner Lab, including an ACM TLS certificate for my own domain.
- Evaluated security controls for a cloud-migrated e-commerce platform and recommended options.
- Designed a predictive pre-warming controller and a Bayesian configuration optimiser for AWS Lambda in a 6,000-word research proposal.

Homelab and personal cloud | Ongoing

- Self-hosted NAS on an ARM board (RK3568), reached remotely through Cloudflare Zero Trust tunnels with no inbound ports opened.
- Recovered the board from a soft-brick through Maskrom mode, then self-hosted an AI agent platform on it.
- Building a portfolio site with React on Vercel and Django REST on Render, with DNS on Cloudflare.

Experience

Senior Analyst I, Infrastructure Services | DXC Technology (client: ExxonMobil), Shenzhen | Oct 2024 – Apr 2025

- Led the on-site support team to meet agreed service levels.
- Presented change requests at CAB and CRB meetings, with scope, risk and implementation plans.
- Ran root cause analysis for major incidents and tracked fixes to closure.
- Reviewed resolved ServiceNow incidents for fix quality, and took part in internal audits and vulnerability assessments.

IT Supervisor | China National Chemical Engineering & Construction Corporation Seven, Chengdu | Jul 2023 – Sep 2024

- Monitored a 30,000+ host estate with Zabbix, Prometheus and Grafana.
- Deployed Zabbix agents and scripts in bulk with Ansible and built custom monitoring templates.
- Tuned Zabbix configuration to lighten server load and keep dashboard data accurate.
- Wrote Python scripts that replaced repetitive manual operations tasks, plus runbooks for the team.

Technical Support Specialist | ANZ Bank Service Centre, Chengdu | Feb 2019 – Jan 2022

- Supported VMware Horizon virtual desktops and Workspace ONE endpoint management for bank staff.
- Managed desktop pools, image updates and Identity Manager access issues.

- Triaged incidents by business impact and escalated with clear notes to L2 and service managers.

Onsite Support Engineer | Nokia, Chengdu | Feb 2017 – Feb 2019

- Break-fix, IMAC/D, data recovery and Hands and Eyes tasks on servers and network equipment, tracked against SLAs in HPSM.

Helpdesk Support | DB Schenker, Chengdu | Feb 2012 – May 2016

- First-line support for warehouse staff, covering desktops, email, business applications and RF scanners.

Education

Master of Software Engineering (NZQA Level 9) | Yoobee College of Creative Innovation, Auckland | Apr 2026 – Apr 2027 (expected)

- Completed: Professional Software Engineering, Research Methods, Quantum Computing Theory
- Current: Cloud Security, Data Analytics, Blockchain and Decentralised Digital Identity, Intelligent Transportation Systems
- Capstone: AI healthcare compliance platform (React, Django, PostgreSQL, RAG)

Bachelor of Computer Science and Technology | Sichuan University of Science & Engineering | 2009 – 2011

Certifications

AWS Solutions Architect – Associate (in progress) · Azure Fundamentals (AZ-900) · Azure AI Fundamentals (AI-900) · ITIL Foundation
